Teaching and Research Fields

Macroeconomics, Labor, Search Theory

Teaching Experience

Summer, 2024	Microeconomics with Calculus (Undergraduate), NYU Stern, Teaching Fellow for Professor Simon Bowmaker
Fall and Spring, 2023-2024	Intermediate Microeconomics Analysis (Undergraduate), NYU, Teaching Assistant for Professor Viplav Saini
Summer, 2023	Microeconomics with Calculus (Undergraduate), NYU Stern, Teaching Fellow for Professor Simon Bowmaker
Fall and Spring, 2022-2023	Intermediate Microeconomics Analysis (Undergraduate), NYU, Teaching Assistant for Professors Viplav Saini and Basil Williams
Fall 2022	Microeconomics Analysis (Undergraduate, Honors), NYU, Teaching Assistant for Professor Ennio Stacchetti

Spring 2018	Microeconomics II (Graduate), EESP-FGV, Teaching Assistant for Professor Victor Felipe Martins-da-Rocha.
Fall 2018	Microeconometrics I and II (Graduate), EESP-FGV, Teaching Assistant for Professors Bruno Ferman and André Portela

Research Experience and Other Employment

2018	EESP-FGV, Research Assistant for Professors Bruno Ferman and Fernanda Estevan
------	---

Seminars

2024	NYU Stern Macro Lunch CORE Week at the Federal Reserve Bank of Richmond (Sep.) NYU Student Macro Lunch (Sep.) Federal Reserve Bank of St. Louis Ph.D. Dissertation Fellows Workshop (Aug.) CORE Week at the Federal Reserve Bank of Richmond (May) NYU Student Macro Lunch (March)
2023	NYU Student Macro Lunch (Dec.) Rice-LEMMA Conference, Paris, France (May)
2022	NYU Student Theory Lunch (Oct.) NYU 3rd Year Paper Conference (May)

Honors, Scholarships, and Fellowships

Summer 2024	Dissertation Fellowship, Federal Reserve Bank of St. Louis AEA Summer Fellowship, Federal Reserve Bank of Richmond
2019-2024	Henry Mitchell MacCracken Fellowship, NYU
2017-2018	CAPEs Fellowship, MA in Economics, EESP-FGV
2017-2018	FGV Fellowship, MA in Economics, EESP-FGV

Research Papers

External and Internal Markets for Managers (Job Market Paper, *draft coming soon*)

This paper studies the labor market for managers by examining both between and within firm reallocation channels. I document that around 40% of the inflows into managerial positions come from internal promotions, a flow comparable in size to the job-to-job transitions into the same roles. I develop a labor search model with internal reallocation and on-the-job learning. External flows depend on how firms are currently internally organized. Internal flows depend on the extent of skill accumulation of workers under managers and on external hiring and separation events. Using administrative data from Germany, I document that managers receive a substantial wage premium and play a key role in the skill development of workers within the establishment. The model matches observed external and internal flows into managerial positions and provides insights into how these channels operate across the talent distribution. Lastly, I evaluate policy implications of targeted Non-Compete Agreements, finding that restrictions on managers lead to fast-tracked promotions and reduced output, whereas non-competes on workers enhance skill accumulation and increase productivity.

Opaqueness and Liquidity in Over-the-Counter Markets (with [Fernando Lopes](#) and Angelo Mendes)

We develop a model of search in OTC markets with asymmetric information and trade occurring under double-sided uncertainty over asset quality, where holding the asset does not necessarily translate into knowing its quality. This leads to deterioration of market information conditions over subsequent trades, causing both sellers and buyers to become more pessimistic even though aggregate asset quality remains unchanged. If re-trade opportunities are frequent, information in the economy becomes coarser, hindering market liquidity and volume of trade.

Research In Progress

Repeated Trade, Specialization and Market Power in OTC Markets (with [Fernando Lopes](#) and Angelo Mendes)

Pre-PhD Research

Shaping the Truth: History Distortion Post-Conflict (with [Daniel Monte](#))

How should information be transmitted to the next generation in the aftermath of a conflict? We propose a dynamic model where two groups engage in an infinite sequence of conflict games with evolving costs, observed only when there are conflicts. Without communication, conflict persists endlessly. Optimal communication by informed leaders generates peace cycles and balances the important trade-off between how likely peace will be versus how long it will last. This balance depends crucially on the baseline environment's stability. In highly unstable environments, optimal communication mimics static Bayesian persuasion games. Conversely, in stable environments, optimal communication implies only slight distortions in conveying history.
